Final PJ

Please perform a causal analysis based on what you have learned in this. Think of the following questions:

- What's your research question? (providing the DAG)

- How do you choose the confounders and how to do the adjustment?

- How to show the robustness of the estimation? (i.e. any unmeasured confounders? all the hypothesis verified?)

Some example data sets are provided. You can also use your own data set.

- Heart disease data
  https://archive.ics.uci.edu/dataset/45/heart+disease

- wage data
```
> library(wooldridge)
> ?wage2
```
